

REMOVABLE ELECTRON MULTILEAF COLLIMATOR

ABSTRACT

- 5 A removable electron collimator for use in collimating an electron beam in a radiation therapy device is provided, where the collimator includes drive electronics, removably mounted on an exterior of an accessory tray of the radiation therapy device. The electron collimator also includes a plurality of leaves positionable by the drive electronics to move across a path of the electron beam, the plurality of leaves
- 10 removably mounted on the accessory tray of the radiation therapy device.
